

# ***JUST BREATHE..***

You may have been told in the past to "take a few deep breaths" when you were feeling worried or upset about something. On one hand this is helpful to just slow down and cool off. However, altering the speed of our breath actually can slightly change our body's anxiety response.

Slow diaphragmatic breathing is a developed technique that involves slowing down the breath to communicate "safety" to the brain.

While we do not recommend that you use breathing techniques to try to eliminate anxiety when you are feeling anxious, it can be a way to get through a tough situation and calm the body some so that we can make a good decision about what to do next.
